

Documentation / Report (16137350)

1. Adding a New Restaurant

- To add a new restaurant we will need to add data to the “restaurants.csv” and “food.csv”.
- These files can be located in the project directory under this path:
“~/Food_Delivery_App/app/src/main/assets”
- To add a restaurant, open the “restaurants.csv” file.
- Add a new entry to add a new restaurant.
- To add a restaurant, please supply the following fields:
 - **restaurantID**: a unique Integer identifier for the restaurant. Primary key of the restaurant database table.
 - **restaurantName**: the name of the restaurant.
 - **foodType**: what type of food/cuisine the restaurant serves.
 - **location**: the location of the restaurant in the form of the suburb.
 - **logo**: the logo of the restaurant. Please supply an URL to the restaurant’s logo image.
- Make sure to remember the restaurantID to enter entries for restaurant food items.
- To add a restaurant’s food items, open the “food.csv” file.
- Add a new entry to add a restaurant’s food items.
- To add a new entry, please supply the following fields:
 - **foodID**: a unique Integer identifier for the food item. Primary key of the food database table.
 - **restaurantID**: a unique Integer identifier for the restaurant the food item belongs to.
 - **restaurantName**: the name of the restaurant.
 - **foodName**: the name of the food item.
 - **price**: the price of the food item.
 - **description**: add text to describe the food item. In our case, we supply the energy intake.
 - **picture**: the picture of the food items. Please supply an URL to the food item’s image.
- Once the new restaurant and new food items are added in the correct csv files, please wipe the data of the emulator device and restart the application.
- The new data will then be displayed inside the application.

2. Contribution

Did not work in a group. Individual submission.
